Abderrahim El Ouariachi

Penetration Tester & Full-Stack Laravel Developer

Penetration Tester and Full-Stack Laravel Developer specializing in web application security, infrastructure assessment, and secure software development. Experienced in identifying critical security vulnerabilities, performing large-scale attack surface assessments, and securing production environments for modern web applications.

Experiences

Marsa Maroc

Network Security Specialist

Internship Sep 2026 - Oct 2026

- Designed and simulated a site-to-site IPSec VPN between two company branches in GNS3, validating secure connectivity before deployment.
- Deployed an SSL VPN on a FortiGate 40F in a live network, enabling secure remote administration and cutting access time by 80%.
- Configured firewall policies on enterprise hardware to control and secure network traffic.

Penetration Tester

Internship Aug 2026 - Sep 2026

- Conducted an internal network penetration test on a Marsa Maroc station, identifying critical vulnerabilities in network equipment and infrastructure.
- Reduced internal network attack surface by 40% through targeted vulnerability identification and remediation guidance.
- Authored a detailed security report documenting critical findings, risk severity, and short-term and long-term remediation procedures for stakeholders.

Confidential

External Attack Surface Assessment

Independent Security Assessment Apr 2026 - May 2026

- Assessed an external attack surface of 13,312 IPs, discovering 205 responsive hosts and vulnerabilities affecting 37 public-facing assets.
- Identified 30 vulnerabilities, including 12 Critical and 11 High severity issues, affecting VPN interfaces, network infrastructure, web applications, and outdated systems.
- A redacted version of the report is available for review here.

WebCom

DevSecOps

Freelancer Mar 2026 - Apr 2026

- Automated infrastructure provisioning with Ansible for scalable, zero-drift deployments.
- Hardened Linux servers by reducing exposed services, securing SSH, configuring firewalls and Fail2Ban, and applying least-privilege access.
- Served as sole DevSecOps owner, independently leading infrastructure, security, and CI/CD pipeline management end-to-end for a production environment.

Laravel Security Analyst

Freelancer Feb 2026 - Mar 2026

- Conducted a black-box penetration test on a multi-tenant AI Laravel app, uncovering 50+ vulnerabilities.
- Identified OWASP API Top 10 issues, RCE, IDOR, and other critical flaws.
- Provided remediation guidance that reduced future security risks by 60%, strengthening the secure development lifecycle (SDL) through improved code reviews and application structure.

Skills

Cybersecurity

- Web Application Penetration Testing
- Infrastructure Security
- OSINT & Reconnaissance
- Network Security Assessment
- Linux & Windows Administration
- Technical Reporting & Communication

Development

- Backend Development (Laravel, PHP)
- Frontend Development (Vue.js, Inertia.js)
- Database Design & Optimization
- Docker & Containerization
- Version Control (Git)
- UI/UX (Figma)

Experiences

Higher School of Technology

Full-Stack Laravel Web Developer

Internship Jun 2024 - Aug 2024

- Led a 4-person intern team to deliver a full-stack web app for EST Oujda.
- Built the app with Laravel, Blade, and Tailwind CSS (modern, responsive UI).
- Mentored team, driving collaboration, communication, and problem-solving.

HackTheBox

Ethical Hacking Practitioner

Practice Sep 2023 - Present

- Achieved Hack The Box Prodigy rank (#76).
- Compromised 330+ targets across web applications, Linux, Windows, Active Directory, and network environments.
- Developed expertise in enumeration, exploitation, privilege escalation, web security, and post-exploitation through realistic attack simulations.

Projects

Obsidian Pentest Vault

Designed a reusable Obsidian vault template that centralizes penetration testing documentation, asset relationships, task tracking, and reporting.

Hack The Box Technical Writeups

Authored detailed writeups for completed Hack The Box machines, covering enumeration, exploitation, privilege escalation, and attack methodology.

PenGate Forum

Built a collaborative penetration testing forum using Laravel, Vue.js, and Inertia.js in a Dockerized Laravel Sail environment.

Guess Royal Game CTF

Developed an intentionally vulnerable Laravel application demonstrating second-order SQL injection, secure query parameterization, attack replay, and mitigation strategies.

Education

Technical Diploma in Computer Science (2021 - 2024) — Graduated with Honors

Higher School of Technology, Oujda
